capsa

We built houses. Then we built Capsa.

We started building projects on site. As engineers and builders, we loved the work — but we kept running into the same problems.

On every job, drawings went out wrong, hours were lost chasing files, and teams drowned in emails.

We knew it could be simpler. So we built Capsa. First for ourselves. **Now for you.**

What Capsa Does

Capsa is simple software for managing your construction design information.

Right drawings, every time.
Always the latest version.

One home for your project.
No more messy folders or lost emails.

Everyone on the same page.
From architects to clients, all in sync.

Info when you need it.
Online, offline, in the office or on site.

Why It's Different

Capsa wasn't dreamed up in a boardroom. It was built on site to solve the real problems that waste time and cost money.

Your focus should be on building. Let Capsa handle the mess. See how it works at capsaapp.com
